

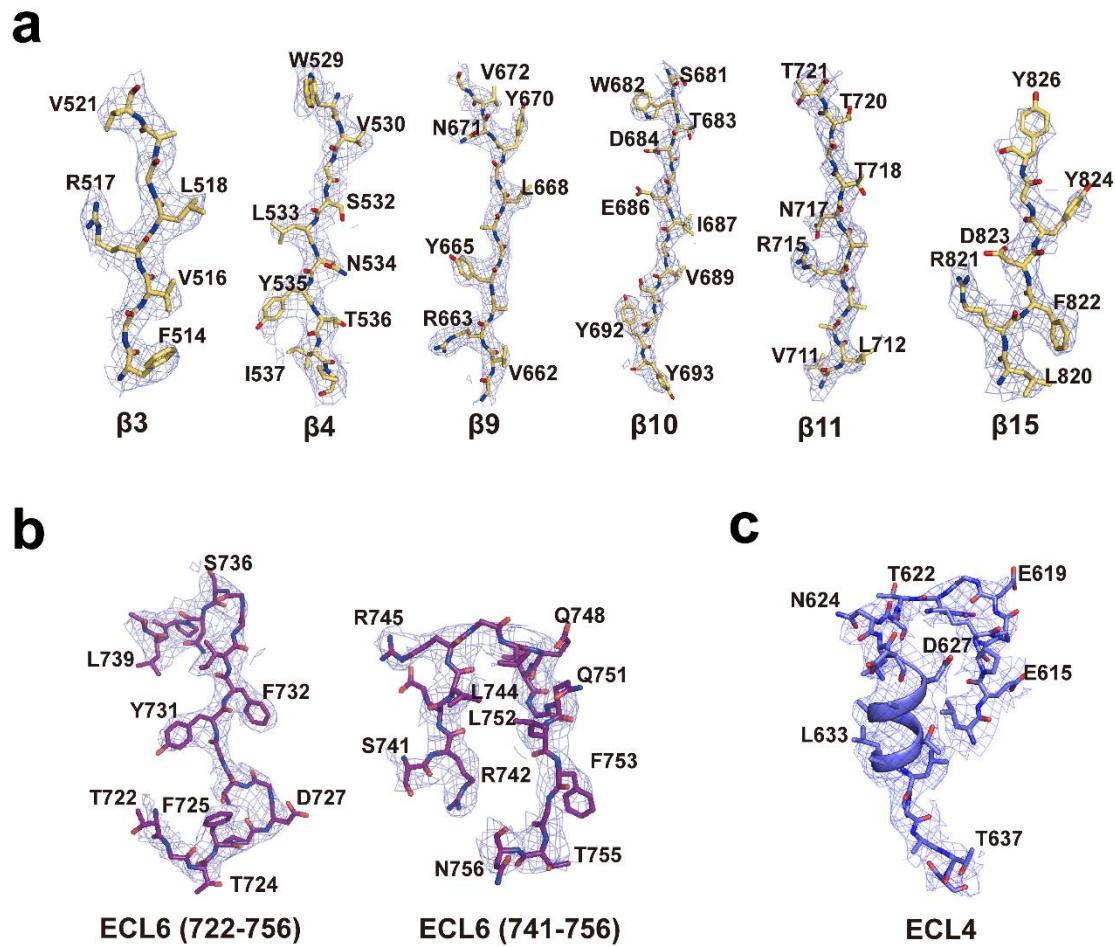

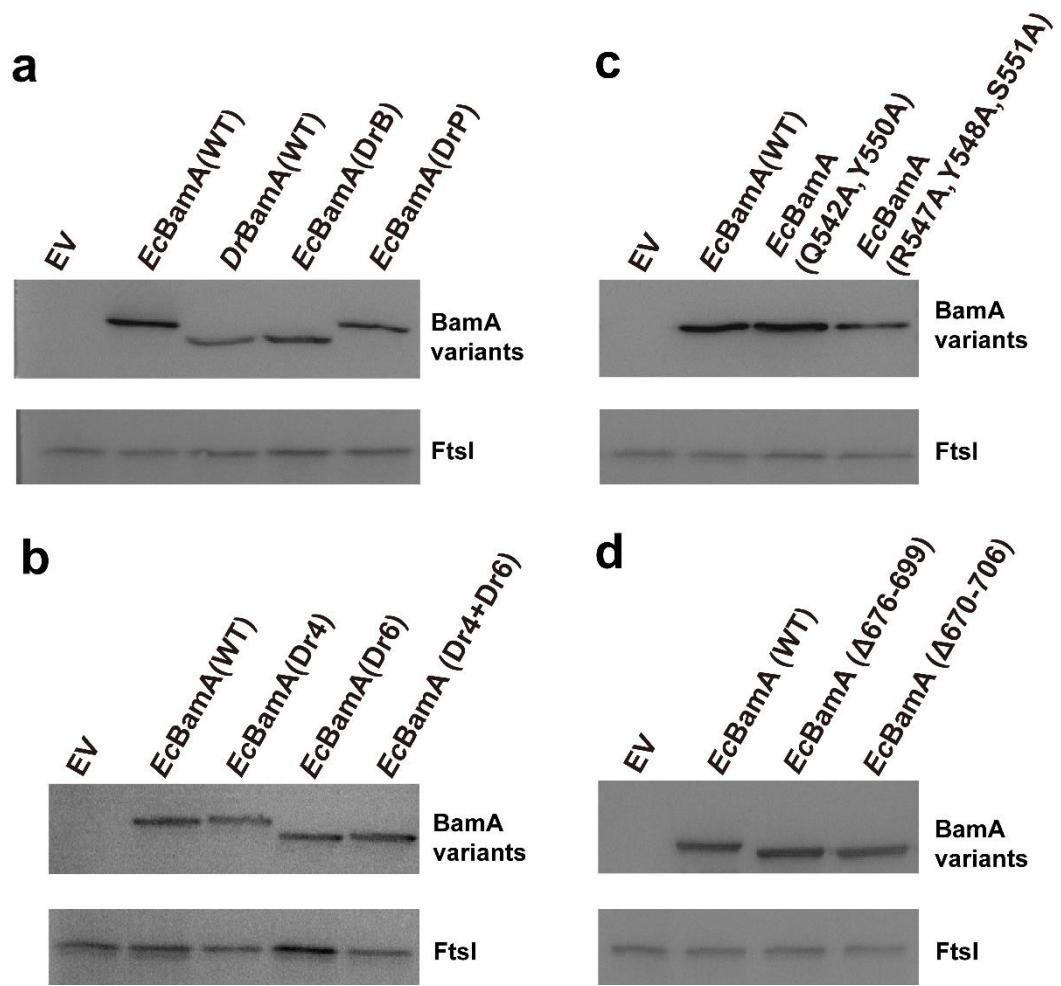

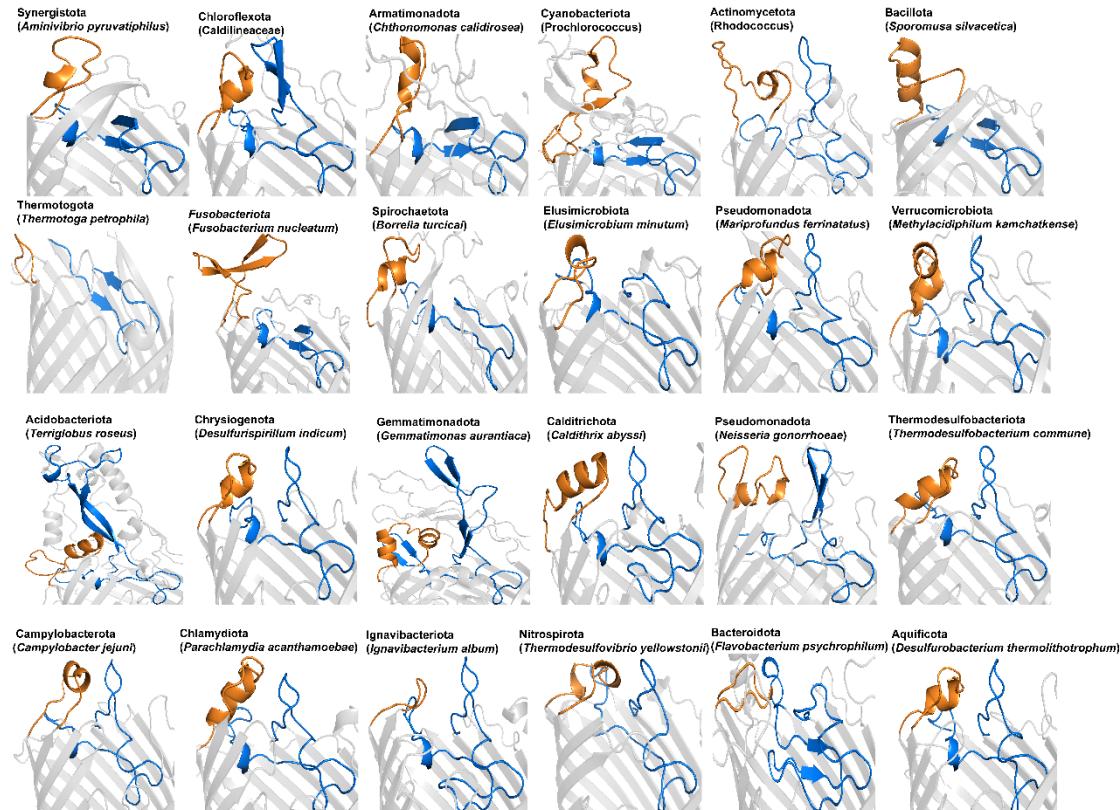

**Figure S1. Purification and Cryo-EM structure determination of *DrBamA*.** (a) Sequence alignment of the barrel domain of *DrBamA* and *EcBamA*. ECL4 and ECL6 of *EcBamA* were labelled. *Ec*: *E. coli*, *Dr*: *D. radiodurans*. (b) Schematic diagram of recombinant *DrBamA* used for protein expression. Affinity tags introduced into protein are indicated. (c) The last step of purification of *DrBamA*. Representative SEC profile and SDS-PAGE analysis of the peak fractions are shown at the top and bottom, respectively. The peak fractions (13 - 14.5 ml, colored in grey) were concentrated for cryo-sample preparation. A representative micrograph of cryo-samples of *DrBamA* is shown beside the SEC profile. (d) Representative 2D class averages of cryo-samples of *DrBamA*. (e) Flowchart for the structural determination of *DrBamA*. Details are provided in the Methods.

**Figure S2. Cryo-EM maps of representative structural elements of *DrBamA*.** The densities were all prepared in PyMol<sup>[1]</sup> with the density of selected  $\beta$ -strands (a) and ECL6 (b) contoured 5  $\sigma$  and the density of ECL4 (c) contoured 3  $\sigma$ .

**Figure S3. Expression test of BamA variants.** (a) Western blot of chimeric BamA carrying different domains of *EcBamA* and *DrBamA*. (b) Western blot of *EcBamA* replaced the ECL4 or ECL6 with the corresponding region of *DrBamA*. (c,d) Western blot of *EcBamA* mutants carrying mutations in ECL4 (c) or ECL6 (d). EV: empty vector.

**Figure S4. Comparative Structure of ECL4 (orange) and ECL6 (navy blue) Across Various Bacterial Species.** This figure highlights the structures of ECL4 and ECL6 in the barrel domains of BamA obtained from existing studies such as *Neisseria gonorrhoeae* BamA<sup>[2]</sup> or predicted by AlphaFold2<sup>[3]</sup>. A comprehensive summary of these structures is presented in Figure 4.

<sup>a</sup> *bamA(DrB)*: gene of the chimera BamA carrying the POTRA domain (Met1-Thr423) of *EcBamA* and the barrel domain(Ile481-Trp846) of *DrBamA*.

<sup>b</sup> *bamA(DrP)*: gene of the chimera BamA carrying the POTRA domain (Gln22-Gly480) of *DrBamA* and the signal peptide (Met1-Gly20) and barrel domain (Gly424-Trp810) of *EcBamA*.

<sup>c</sup> *bamA(Dr4)*: gene of the *EcBamA* replaced the ECL4 (Asn538-Asn563) with the correpongding region (Leu614-Thr637) of *DrBamA*.

<sup>d</sup> *bamA(Dr6)*: gene of the *EcBamA* replaced the ECL6 (Leu641-Asn709) with the correpongding region (Asp727-Thr755) of *DrBamA*.

**Table S2. Summary of data collection and model statistics**

<b><i>DrBamA</i> (EMD-38500) (PDB 8XNB)</b>	
<b>Data collection and processing</b>	
Magnification	81,000
Voltage (kV)	300
Electron exposure (e- /Å <sup>2</sup> )	50
Defocus range (μm)	-1.6 ~ -1.8
Pixel size (Å)	1.07
Symmetry imposed	C2
Initial particle images(no.)	5,755,354
Final particle images (no.)	607,784
Resolution (Å)	3.8
FSC threshold	0.143
Map resolution range (Å)	3.1 ~ 4.7
<b>Refinement</b>	
Initial model	Alphafold2
Map sharpening B factor (Å <sup>2</sup> )	300
Model composition	
Non-hydrogen atoms	5580
Protein residues	738
Ligands	0
R.m.s. deviations	
Bond lengths (Å)	0.005
Bond angles (°)	0.885
Validation	
MolProbity score	1.95
Clashscore	10.81
Poor rotamers (%)	0.54
Ramachandran plot	
Favored (%)	94.01
Allowed (%)	5.99
Disallowed (%)	0

**Table S3. Characteristic of BamA from different species**

Group	phylum	Species	Uniprot entry	Helix in ECL4	Helix interacts with other ECLs	Stem region in ECL6
