First Middle/Initial Last_Name_A¹, First Middle/Initial Last_Name_B²,
First Middle/Initial Last_Name_C^{2,✉}

¹ University of ABC, 123 University Street, City, 12345, Province

² Institute of XYZ, 459 Main Street, City, State, 98765

✉ Corresponding Author(s): First Middle/Initial Last_Name_C, E-mail Address

Graphical abstract (required with the final submission)

The graphical abstract is an image that summarizes the main findings of the research. It adds a visual component to the start of a manuscript, helping readers quickly appreciate and understand the central message. The graphical abstract is not requisite for the peer viewing process. You can provide it in the final submission. The image should be 5.5 × 5.5 inches in dimension, 650 × 500 pixels at 300 dpi, using Arial font with a size of 12–16 points, accompanied by a brief description of the image in 20 words or less. Additionally, Additionally, provide the research highlights using 3 to 4 points within a total of 200 words.

Abstract

The abstract should precisely describe the manuscript's research purposes, methods, and results. For experimental papers, the abstract should explain the quantities measured and objects studies and clearly describe the experimental conditions. An abstract should start with one or two sentences, giving your readers a very broad understanding of the need-to-know background information for your studies. Citations or abbreviations should not be included in abstracts. An abstract should be no more than 200 words.

Keywords

keyword1; keyword2; keyword3; (no fewer than 3 keywords no more than 10 keywords)

1 Introduction

The Introduction should be succinct, with no subheadings, and should present the necessary background information to provide a context for the results.

2 Materials and methods

The materials and methods section may contain subheadings. The materials and methods section needs to include sufficient detail so that readers can understand how the experiments were performed and so that all procedures can be repeated in conjunction with cited references. This section should also include a description of any statistical methods employed in the study.

2.1 subheading for materials and methods

write your content here

Figure 1: cover of JUSTC

3 Results and Discussion

The results section can contain subheadings. The discussion should explain the significance of the results and place them into a broader context. It should not be redundant with the results section. This section can contain subheadings.

3.1 subheading for results and discussions

Write your content here.

3.2 subheading2 for results and discussions

Write your content here.

3.2.1 subsubheading for subheading2

Write your content here.

4 Conclusions

Present clear and robust conclusions that are drawn from the work. Discuss your findings in order of most to least significant. Mention any inconclusive results and explain them as best you can. State how your results extend the findings of previous works. If you need to list your conclusions in several points, please use uppercase Roman numbers: I, II, III,

Supporting Information (if applicable)

This section should be titled “supplemental information” and briefly list the data types included in the supplemental information. For example, “supplemental information includes four figures and two tables.”

Disclosures (if applicable)

This section will provide disclosures regarding safety, regulations, or research ethics statements. Please address every significant hazard and risk that other researchers will encounter when carrying out the study in this manuscript. If such threats exist, there must be a description and approach to mitigate the hazards.

Acknowledgments (if applicable)

The authors wish to acknowledge Professor ABC for his helpful discussions regarding the experimental design. This work was supported by the National Natural Science Foundation of China (Grant Number 1235678).

Conflict of Interest (required)

Disclose any conflicts of interest. If no conflicts of interest exists, include the following statement: The authors declare that they have no conflict of interest.

Biographies

First Middle/Initial Last_Name_A received his Ph.D. degree in Chemistry from the University of ABC in 2021. He is currently a postdoctoral fellow at the School of DEF, University of ABC. His research mainly focuses on electrocatalysis.

First Middle/Initial Last_Name_C received his Ph.D. degree in Chemistry from the University of ABC in 2000. He is currently a professor at the School of DEF, University of ABC. His major research interests focus on electrochemical energy conversion and storage.

Preprint Statement (if applicable)

Research presented in this article was posted on a preprint server prior to publication in JUSTC. The corresponding preprint article can be found here: (DOI; Direct Link)

References

Reference citations in the text should be numbered consecutively in square brackets. Some examples:

1. Deep learning has seen considerable growth in the past decade^[1-4].
2. R represent polarization resistance^[16,17].

References should include only articles that are published. Personal communications and unpublished work should only be mentioned in the text. Do not use footnotes or endnotes as a substitute for a reference list. In the references list, “et al.” should

be used only after 3 authors. References with fewer authors should list all authors. Please use the following styles for references:

Article in a journal publication

- [1] Mnih V, Kavukcuoglu K, Silver D, et al. Human-level control through deep reinforcement learning. *Nature*, **2015**, 518 (7540): 529–533.

Article in a book

In-text citations

Unpublished data and personal communications may be cited within the text only. Submitted articles that have not yet been accepted should be cited as unpublished data.

- Unpublished data may refer only to work from an author of the manuscript being submitted.
- A personal communication should be documented by a letter of permission (this may be in the form of an e-mail communication, letter, or other appropriate form of permission).

Please use the following style for such citations:

Unpublished data

(Unpublished data by Nagai et al.)

Personal communication

(Adams M, personal communication)

Figures

Figures are usually embedded in the main text of the manuscript. A figure is usually placed after the end of a paragraph where the figure is first mentioned. Every figure should have a caption that clearly summarizes the contents of the picture. Define figure symbols and curves either in a legend in the figure itself or the caption. If there are sub-figures, label them as (a), (b), etc., and describe each panel in the caption. It's best to combine multiple panels in one file.

All figures must be mentioned in the text by their numbers. Each figure must be numbered consecutively with whole numbers. In other words, figures must be numbered as Figure 1, Figure 2, Figure 3, etc., rather than as Figure 1a, Figure 1b, Figure 1c, etc.

For map figures, please be sure to use the authorized standard maps available at <http://bzdt.ch.mnr.gov.cn/> as base maps and do not modify the borders.

Tables

Embed Tables in the main text of the manuscript. Place a table after the end of the paragraph where the table is first mentioned.

Tables must be mentioned in the text by their numbers. Tables must be numbered consecutively as Table 1, Table 2, Table 3, etc., rather than as Table 1a, Table 1b, Table 1c, etc. When creating a table, please use the Microsoft Word table function, and please do not place an Excel table into a Word document. Do not submit a table in PDF format. Tables should not be saved as figures, e.g., as .jpg or .tif files. Tables should not be uploaded individually.

Word tables should not be tab or space delineated and should not include colored text or shading, but embedded graphics with color are OK. Do not use paragraph returns to separate data within a cell. Tables should include a title, and footnotes

and/or legends should be concise. Use superscript lowercase letters (beginning with "a") for footnotes in tables. Do not use numbers or symbols.

If mention a referenced paper or study within a table, must list it in the references and cite it by its appropriate citation number (e.g., "Author *et al.*^[1]") within the table. Define all abbreviations within a table in the legend or footnotes.

Permissions

Please provide proof of permission to include any work cited as "personal communication." The evidence may be an email communication, letter, or other appropriate permission forms.

Please provide proof of permission for figures that have been reprinted in an outside source.
